The OEC is working directly with utilities to help modern and efficient.

Making Ohio's electric grid more modern and efficient.
The OEC is working directly with utilities to help modern and efficient.

The OEC helped to secure a landmark win for drinking water this past year. As the news of Flint, Michigan was reverberating throughout the country, the OEC learned that we had our own mini-Flint right here in Sebring, Ohio. Knowing that Ohio children could be drinking lead tainted water, we stepped into action immediately, analyzing state and federal rules on lead and putting forward a strong legislative proposal. We took this information to Ohio EPA leadership and our partners in Michigan and Ontario to secure a commitment to reduce toxic algae-causing pollution. We raised the issue in the press and worked with EPA leadership and our partners in Michigan and Ontario to secure a commitment to reduce toxic algae-causing pollution.

On August 2, 2014 nearly a half-a-million people were told not to drink their tap water because of a toxic algal bloom in Lake Erie. The OEC quickly went to work, rallying with our partners in Ohio, Michigan, and Ontario to call for a 40% reduction of toxic algae-causing pollution by 2025. While Ohio's plan to achieve these reductions contain a number of positive proposals, it must be strengthened. The OEC will continue to work with our partners to push for a comprehensive solution to Ohio's toxic algae plague.

The OEC recently has transitioned to a July-June fiscal year from a calendar year. These charts represent financials from the OEC's most recent 12-month fiscal year, January to December 2015.

The OEC is a careful steward of your investment in a cleaner, more beautiful Ohio.
